Astragalus calycinus

Habitus and growth type

Life span: **Perennial**
Life form: **Hemicryptophyte**

Trophic mode

Parasitism and mycoheterotrophy: **autotroph**
Carnivory: **non-carnivorous**
Symbiotic nitrogen fixation: **symbiosis with rhizobia**

Taxon origin

Origin in Europe: **Native**

Ecology

Disturbance indicator values

Disturbance frequency: **2.52**
Disturbance frequency (herb layer): **2.52**
Disturbance severity: **0.5**
Disturbance severity (herb layer): **0.5**
Mowing frequency: **1.3**
Grazing pressure: **0.5**
Soil disturbance: **0.2**
