Albizia julibrissin

Habitus and growth type

Plant height [m]: **5.01**
Life span: **Perennial**
Life form: **Phanerophyte, Tree**

Flower

Flowering period: **May-August**

Fruit, seed and dispersal

Seed mass [mg]:

Trophic mode

Parasitism and mycoheterotrophy: **autotroph**
Carnivory: **non-carnivorous**
Symbiotic nitrogen fixation: **symbiosis with rhizobia**

Taxon origin

Origin in Europe: **Neophyte**

Habitat and sociology

Broad habitat
Occurrence in broad habitats: **Scrub**
